

# THANK-YOU FOR TRUSTING ENDURANCE DOORS TO **PROTECT YOUR HOME.**

Your Endurance Door is the strongest and most secure door on the market, but only when it is locked. When your door is closed it is important to always fully engage the locking mechanism by either lifting the handle or turning the key.

## IMPORTANT INFORMATION

Your door is constructed using environmentally friendly natural timber. It may move around slightly at the top and bottom as it adjusts to its new surroundings. In order to prevent this, try to keep the temperature as low and consistent as possible around the door for the first 8 weeks.

It is always essential to fully engage the lock hooks by either lifting the handle or turning the key. This will prevent the natural timber of your Endurance door moving whilst it acclimatises to its new surroundings.

## KEEP ME LOOKING GREAT

### PLEASE DO ✓

Wipe down the door with a damp, lint-free cloth using only mild warm soapy water.

To keep your furniture sparkling, polish the handle, letter plate and knocker with everyday furniture polish.

### ANNUAL CARE

To maintain the smooth operation of your locking cylinder, lightly dust your key with Graphite Powder then place your key into the lock. Move your key backwards and forwards 10-15 times to lubricate the cylinder.

Open the door and place an old sheet underneath it. Lubricate all of the moving parts with silicone spray, apart from the locking cylinder.

### PLEASE DON'T ✗

**Do not** use any harsh chemicals or solvents to clean your door. This will damage the skin of your door and cause discolouration.
